ALG0RIDDIMS_

LIVE-CODED MUSIC AND VISUALS

001 · SAT 21 NOV 2026 · HAMILTON HOUSE

Three rules

TYPED, NEVER DRAWN

The mark is the name typed in a code editor: IBM Plex Mono Bold, Plex's own dotted zero, and a cursor. If it can't be typed, it isn't the mark.

THE ART IS THE PROCESS

Every pattern is a step sequencer drawn as a grid: rows are tracks, dots and bars are hits. The artwork is made the way the night is made, with code.

THE SEED IS THE DATE

Each event's pattern grows from its date (DDMMYY). Every night gets its own artwork, the same night always gets the same one, and the poster and the projection match.

CONTENTS

03 Wordmark
04 Grid and type
05 Colour: core
06 Colour: programmes
07 Colour: colourways
08 Pattern
09 Layout
10 Formats
11 Motion
12 Looks and randomise
13 Production

Locked and variable

The event and the brand are locked. Only the look moves, by hand or with Randomise. A look never changes what the poster says or where it says it.

LOCKED · EVERY ARTEFACT	VARIABLE · THE LOOK
Seed (event date)	Colourway (except INVERT)
Programme	Mode: sweep, poly, drift, rain, auto
Event text: subtitle, date, time, place, entry	Rate, swing
Set list and strapline	Decay, pulse, ripple
Palette (hex values)	Density, voice mutes
Layout zones on the cell grid	Depth, downbeat push, row shift
Type: Plex Mono Bold and Regular, Plex Sans	Auto scene length
Wordmark and cursor	**Manual only:** INVERT, downbeat flash, live edit

A look is saved as a four-character code, such as 12A7. The same code gives the same look on any machine, in the player or in an export.

Typed, never drawn

LOGO FILES: BRAND/ IN THE REPO

ALG0RIDDIMS_

PRIMARY · PAPER ON INK

ALG0RIDDIMS_

REVERSE · INK ON PAPER

0_

MICRO · AVATAR, APP ICON

0

YES · PLEX'S OWN ZERO

Ø

NO · SLASHED ZERO

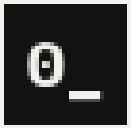

O

NO · LETTER O, OR Ø

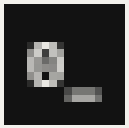

Set in IBM Plex Mono Bold at tracking 0, with Plex's own zero: the dotted one. The dot is a hit in an empty step. The zero is a sequencer cell with one hit in it, the same dot the pattern is made of.

It is Plex's default, so it comes out right in every app that has the font: InDesign, Figma, PowerPoint, Canva, a code editor. There is no feature to switch on and nothing to go wrong.

The cursor is the twelfth character: printed solid, blinking on the beat on screen. Running text spells the name Algoriddims; only the mark uses the zero.

32 PX · TYPED

16 PX · TYPED: DOT GONE

16 PX · HAND-SET

MINIMUM SIZE

Wordmark: at least 20 px type on screen (about 145 px wide), and 30 mm wide in print. Micro mark: at least 32 px. Below that the dot closes up and the zero reads as a letter O. Shown here enlarged, pixel for pixel.

For 16 px favicons, use the hand-set file in brand/. It is the one drawn exception, because no typeface keeps the dot at 16 px.

Don't redraw it. Use the logo files: they are Plex's own outlines. No custom letters or kerning.

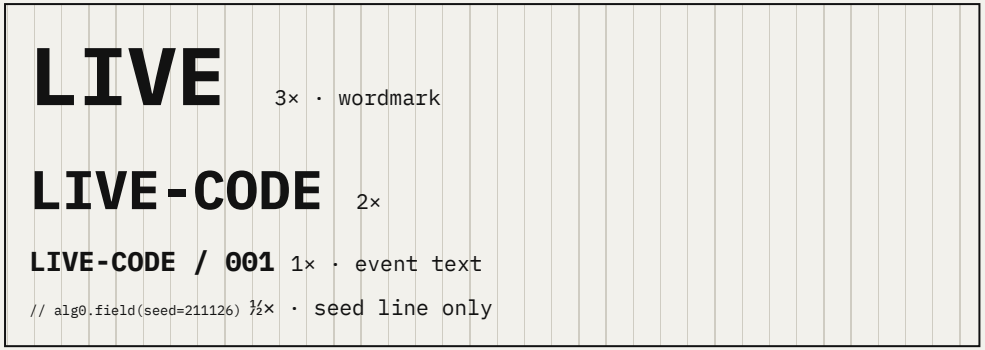

Don't swap the zero. No slashed zero, no letter O, no Ø. The dotted zero is the mark.

Don't track or squeeze it. Tracking stays at 0 or the letters fall off the cell grid.

Don't colour it. Paper on Ink or Ink on Paper. Colour belongs to the pattern.

Don't drop the cursor. It is part of the mark at every size, the micro mark included.

One character, one cell

The cell is one Plex Mono character at the base size. Sizes are whole multiples of it (1×, 2×, 3×), plus ½× for the seed line, so every size lands on the same columns. On a 1080-pixel poster the cell is 24 px.

Text sits in boxes cut out of the pattern. Boxes pad their text by one cell, start and end on cell edges, and are the ground colour, so they read as cleared cells of the field. Sub-lines indent two cells, like code. Left-aligned only. Tracking is always 0.

One family, three styles

PLEX MONO BOLD · MARK, DISPLAY, EVENT VALUES, NAMES

SAT 21 NOV 2026 19:00

PLEX MONO REGULAR · LABELS, SET LIST TIMES, SEED LINE

DATE · 20:00 · // alg0.field

PLEX SANS REGULAR · RUNNING COPY, TWO LINES OR MORE

Music and visuals written live, in front of you, above the Canteen at Hamilton House.

Three styles from a family of more than 100. Every extra weight is somewhere for the system to drift. Plex is under the SIL Open Font Licence: free for print, web, merch and the projector.

Labels are Regular and values are Bold, and values start on one column: the info block, the set list and the readouts all follow this.

Every colour is a sound

Four colours never change. They are the series. Each voice in the sequencer has one colour, so the pattern can be read as a rhythm: red dots are kicks, paper bars are hats, the rare cyan hit is an effect.

INK · GROUND

#121212 · RGB 18 18 18

Ground and every text box. About 80% of any layout.

PAPER · HAT

#F2F1EC · RGB 242 241 236

All type, and the hat bars. About 10%.

KICK RED · KICK

#FF0033 · RGB 255 0 51

Kick hits. About 5%. The heartbeat of every event.

FX CYAN · FX

#00E5FF · RGB 0 229 255

Effect hits. 1% at most: the rarest hit on the page.

PROPORTION: INK 80 · PAPER 10 · KICK 5 · PROGRAMME 4 · FX ≤1

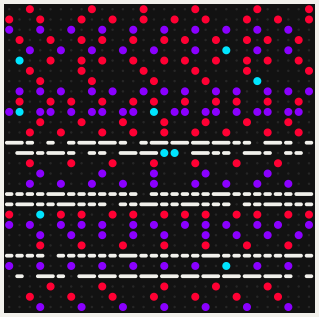

Type is Paper on Ink or Ink on Paper, nothing else. Never type on an accent; never an accent in type. Colour belongs to the pattern.

The fifth voice, the snare, carries the programme colour: see page 06.

Values are RGB: screen and projection come first. Retired from v0.1: #FF2B2B, #9B28FF, #A020FF, #1E1B1F, #0A0A0A, #F5F5F4, #F4F4F1 (the same colours drifting sheet to sheet) and Warm Brown #4A2A0E / #6B3F1E (no voice to map to).

The snare is the programme

ALL SIX TILES: SEED 211126. ONLY THE SNARE COLOUR MOVES.

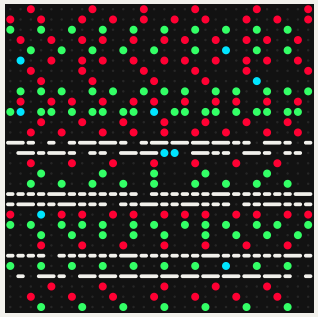

NIGHT

ULTRAVIOLET · #8A00FF

Performance nights. 001 is a NIGHT.

READS ON PAPER

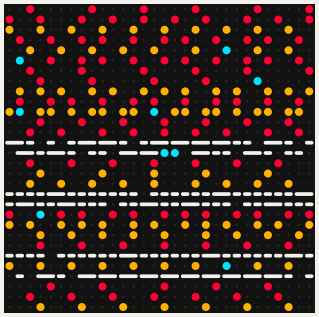

WORKSHOP

PHOSPHOR · #33FF66

Teaching and open-laptop sessions. Green terminal phosphor.

INK ON PAPER

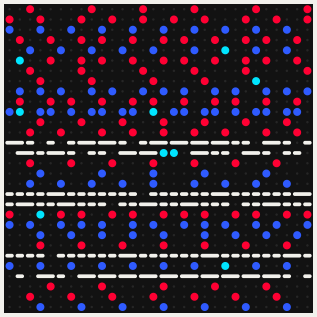

TALK

AMBER · #FFB000

Talks, panels, listening sessions. Amber terminal phosphor.

INK ON PAPER

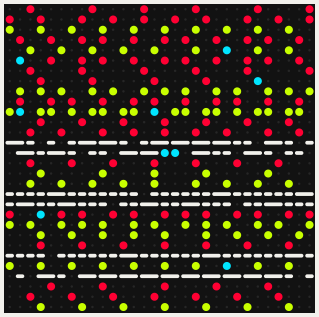

STREAM

SIGNAL BLUE · #2F5BFF

Online and streamed sets. Screen first.

READS ON PAPER

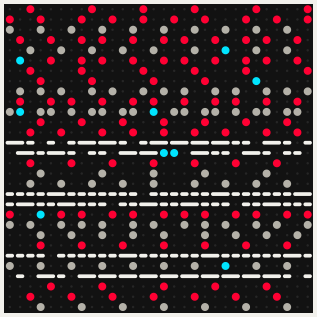

JAM

ACID LIME · #C8FF00

Open jams and first-timer sessions: anyone can take the laptop.

INK ON PAPER

ARCHIVE

SILVER · #B4B1A8

Recordings, mixes, releases and write-ups after the night.

INK ON PAPER

One programme colour per piece, never two. It follows the snare's rules: pattern only, never type, about 4–5% of a layout. The subtitle names the programme and the number runs across the whole series: BRISTOL LIVE-CODE / 001, then WORKSHOP / 002.

Each programme colour differs from Kick Red in lightness, not only hue, so the voices separate for colour-blind viewers. Orange and magenta were tested and left out: both sit too close to the red.

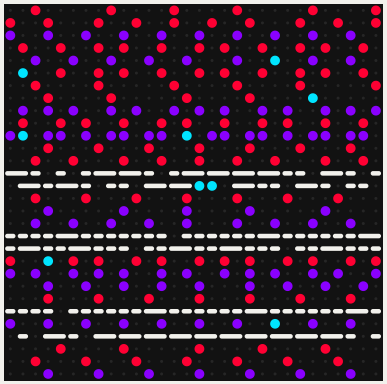

Guest or collab nights: the partner's colour may take the snare slot if it is clearly lighter or darker than Kick Red and is not a near-copy of a programme colour. Otherwise the night stays NIGHT. Six is the ceiling: more programmes and the series stops looking like one series.

"Reads on paper" = 3:1 or better against Paper, used by INVERT

Same palette, five arrangements

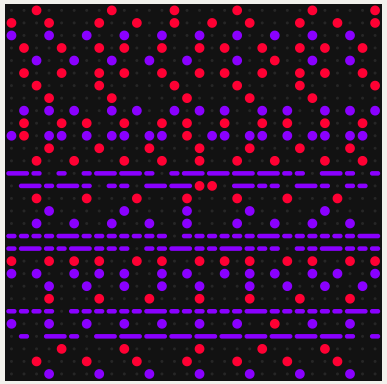

SEED 211126 · NIGHT

A colourway re-assigns the locked palette to the voices. It never adds a colour. The pattern stays the same; only what each hit is painted with changes.

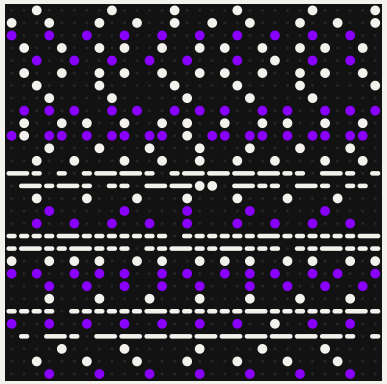

STANDARD

Kick red, snare programme, hat paper, FX cyan. The default, and three looks in every seven.

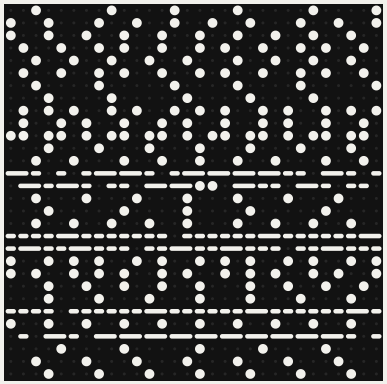

DUO

Red and the programme colour only. The loudest arrangement: line-up drops, headline nights.

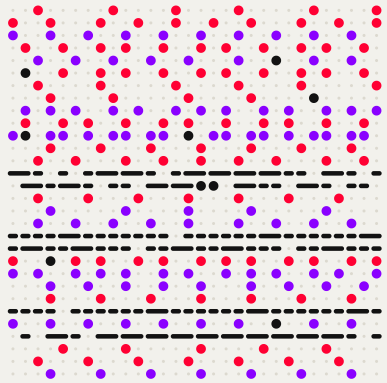

ACCENT

All paper except the snare. Calm and text-friendly: talks, info posts, long captions.

MONO

Paper only. One-colour print, low-key projection, behind photography.

INVERT · MANUAL ONLY

Paper ground, ink hats, red kicks. Riso, daytime print, venue signage. Programme colours that don't read on paper switch to ink.

SUPPORT NEUTRALS · SCREENS, WEB, DOCUMENTS

RAISED #1E1E1E

Surfaces above Ink: panels, menus.

GHOST #262626

Empty grid steps, dividers on Ink.

MUTE #9A978F

Secondary text on Ink, 6.4:1.

PAPER SHADE #DCD9CF

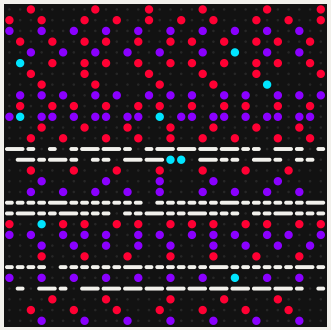

Rules on Paper; INVERT grid. Never text.

GRAPHITE #5A5852

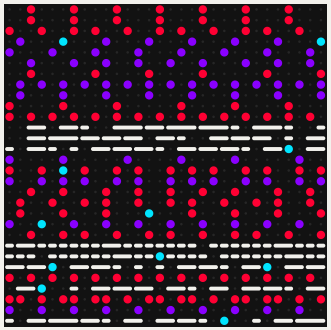

Secondary text on Paper, 6.3:1.

Posters stay Paper on Ink. Neutrals are for interfaces and documents.

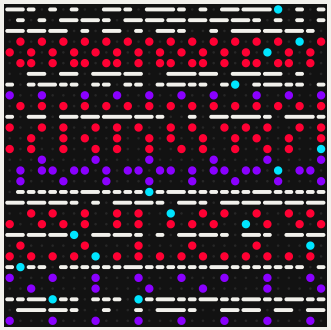

A sequencer, drawn

001 · SEED 211126

SEED 120327 · EXAMPLE

SEED 300427 · EXAMPLE

KICK E(3–6,n) SNARE E(3–5,n) HAT E(5–9,n) FX · 3.5% of hits

Each row is a sequencer track: a Euclidean rhythm E(k,n), the same idea as the (3,8) notation in TidalCycles and Strudel. Rows run at 16, 12 or 8 steps, so they drift against each other. Every eight rows the rotation steps on by one, so the pattern is edited as you read down the page.

The seed is the event date as DDMMYY. The random numbers come from mulberry32, so the Python generator (print) and the JavaScript player (screen) draw the same field, cell for cell. That was checked across six seeds and sizes.

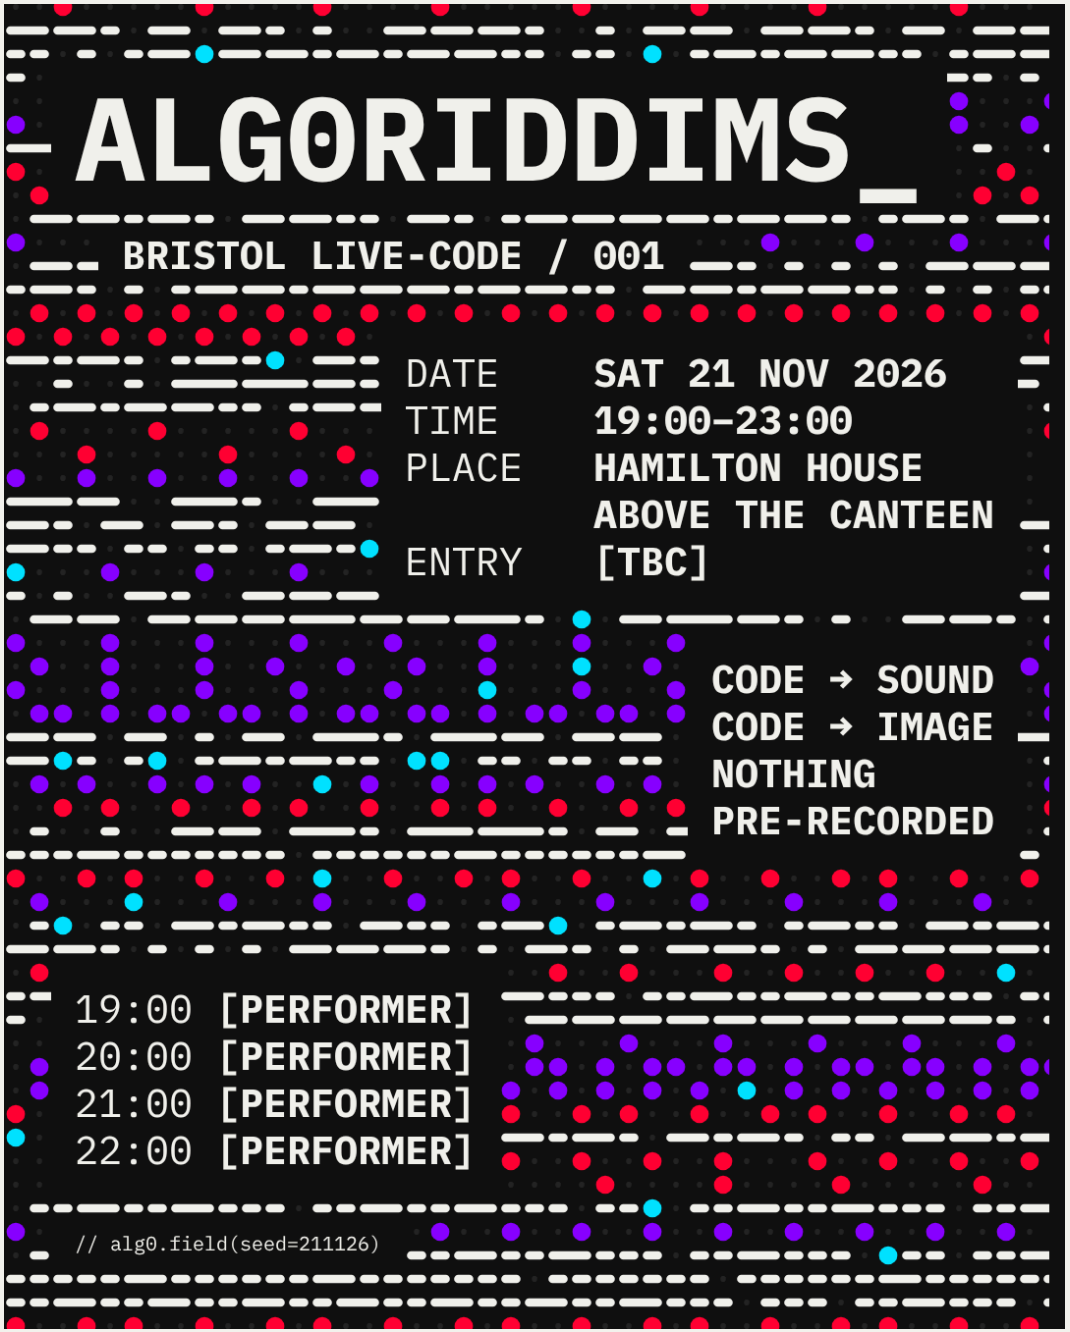

Same seed + same size + same cell = the same artwork. Change the cell size and the field changes, so each format has one fixed cell (page 10).

PRINT MASTER (VECTOR SVG)

```
python3 alg0_field.py 211126 1080 1350 24 field_001.svg NIGHT STANDARD
```

ARGUMENTS

seed · width · height · cell · output · programme (NIGHT, WORKSHOP, TALK, STREAM, JAM, ARCHIVE or a hex for a guest colour) · colourway (STANDARD, DUO, ACCENT, MONO, INVERT)

Six zones, locked

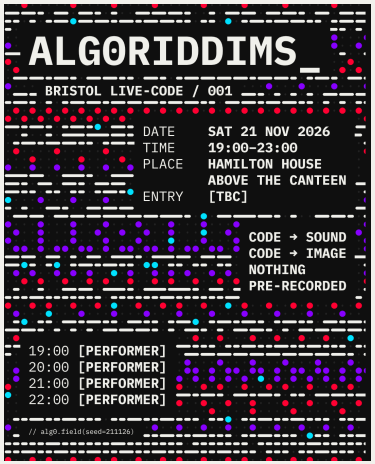

Every artefact uses the same zones on the cell grid. Positions are given in cells from the edge, so they hold at any size. The poster shown is 1080 × 1350 px with a 24 px cell.

ZONE	SIZE	PLACE (POSTER)	CONTENT
1 Wordmark	3×	col 2 · row 3	ALGORIDDIMS_ on every artefact
2 Subtitle	1×	col 4 · row 10	Series or programme / number. Indented two cells.
3 Info	1×	right edge · row 14	DATE (written from the seed), TIME, PLACE on two lines, ENTRY
4 Set list	1×	bottom left · 6 rows up	One act per line, time in Regular, name in Bold. Up to 8 lines on the poster.
5 Strapline	1×	right edge · one row under Info	Up to 4 lines of up to 18 characters. On VJ, level with the subtitle.
6 Seed line	½×	col 2 · 3 rows up	// alg0.field(seed=DDMMYY), the work credited to its own code

The left side carries the name and the line-up; the right side carries the facts and the claim. The set list has the full width (39 characters on the poster) until it grows tall enough to sit beside the strapline; then it gets the width the strapline leaves. A name that does not fit is cut with … and the player says so: shorten it rather than shrinking type.

Nothing else is added to the layout. No logos in the field, no extra boxes, no type on the pattern outside a box.

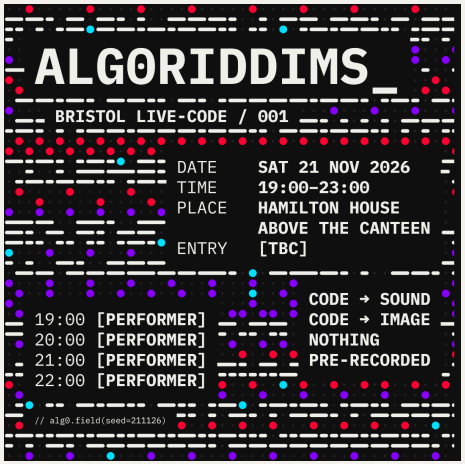

Four formats, one grid

POSTER 4:5

1080 × 1350 · CELL 24 · SET LIST ≤ 8

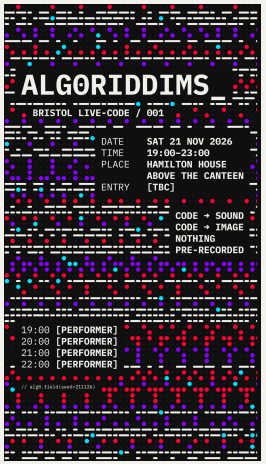

The main asset: feed posts and the A-ratio print master.

SQUARE 1:1

1080 × 1080 · CELL 24 · SET LIST ≤ 5

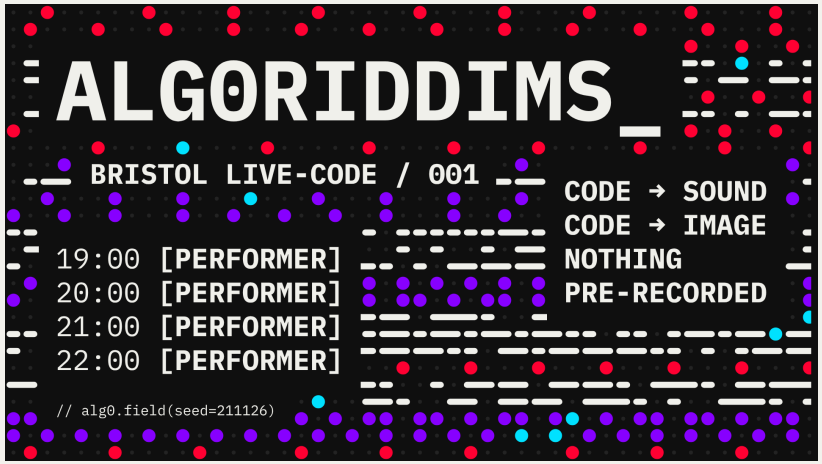

Grid posts and event-listing thumbnails.

STORY 9:16

1080 × 1920 · CELL 24 · SET LIST ≤ 10

Type starts 11 rows down and the bottom zone sits 15 rows up, clear of the app's buttons.

VJ 16:9

1920 × 1080 · CELL 40 · SET LIST ≤ 4

The projector ident between sets. No info block: the room already knows where it is.

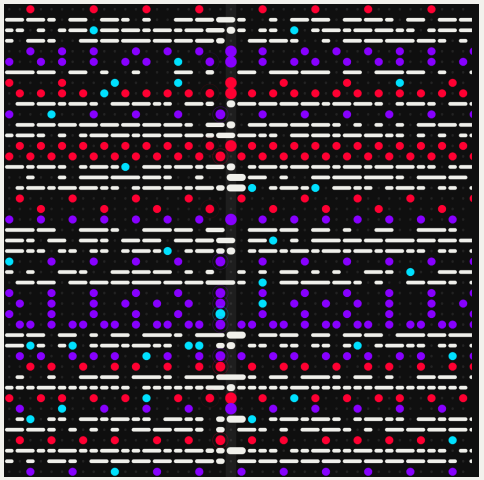

Each format has one fixed cell size, so the same seed always gives the same field in that format. Never resize an export to make another format: render it.

Info and strapline hang from the right edge, two cells in. The set list sits on the bottom zone, from the base: poster and square 6 rows, story 15, VJ 4. The seed line sits under it.

For print, render the field as vector SVG with alg0_field.py at A-ratio (1240 × 1754, cell 27) and set the type on the same grid in InDesign. Don't enlarge a screen PNG.

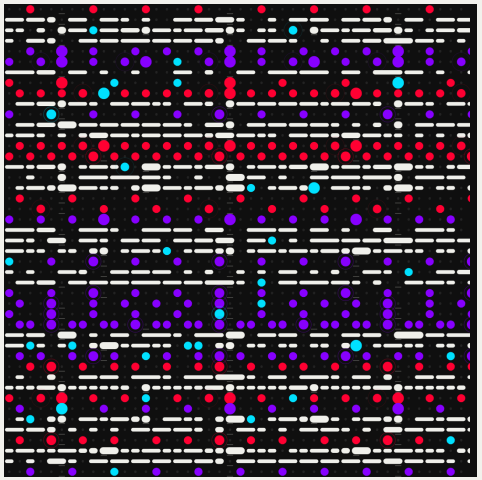

The field plays at the event’s BPM

FRAMES: STEP 21.5, RIPPLE ON

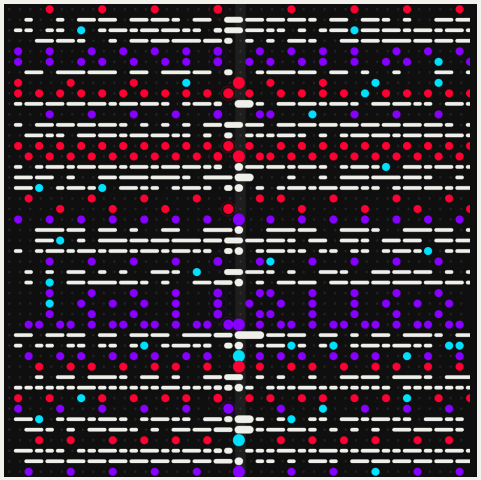

SWEEP

One playhead crosses the field each loop. The poster, played.

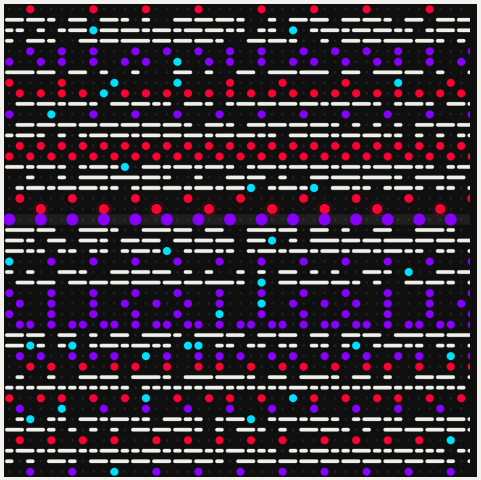

POLY

Each row loops at its own length (16, 12, 8), so rows phase against each other.

DRIFT

The field slides under a fixed playhead, like a tracker.

RAIN

The playhead falls row by row. AUTO cycles all four, changing on the bar.

BPM DRIVES	HOW
Playhead	One column per 16th note
Hits	Pulse as the playhead passes; decay is counted in steps, so it scales with tempo
Cursor	On one beat, off one beat
Rate · swing	Half or double time; swing delays every second 16th
Phrases	AUTO scenes, downbeat push and row shift land on bar lines
Never	The pattern itself. The date sets that, so the screen matches the poster.

Type never moves. Only the field animates, and the downbeat push scales the field, not the boxes.

Loops are counted in whole bars, so every export joins up without a seam: 48 steps for a single sweep (5.1 s at 140 BPM), longer when row shift or AUTO is on.

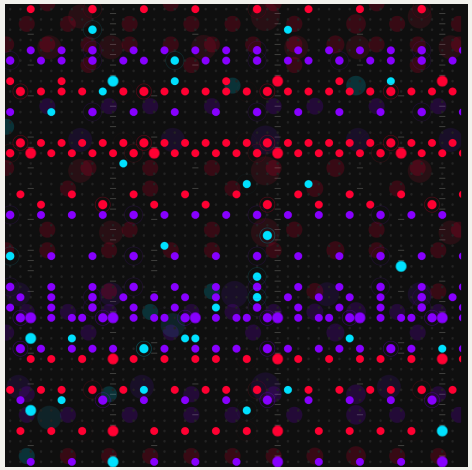

Downbeat flash runs once per bar, about 0.6 Hz at 140 BPM, well under the 3 Hz photosensitivity guideline. It is never switched on by Randomise. If it is used on the night, say so on the event page.

Tap tempo in the player locks to whoever is playing

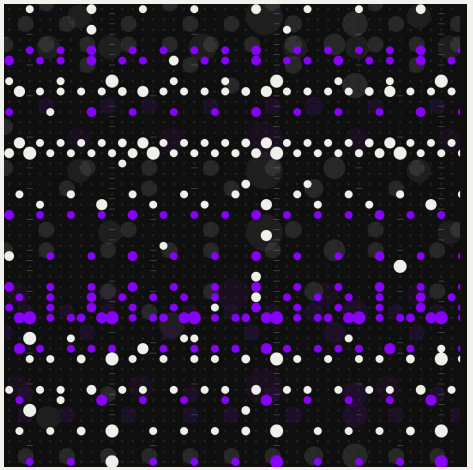

A look is a code

Randomise picks a four-character code and builds every variable from it. Type the code back in and the look returns, on any machine. Anything set by hand marks the look CUSTOM and is exported as values instead of a code.

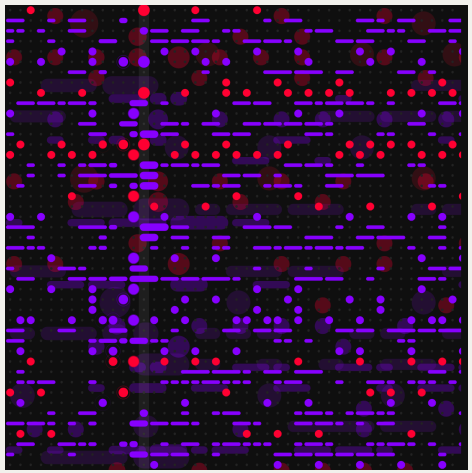

VARIABLE	MANUAL RANGE	RANDOMISE PICKS
Colourway	all five	STANDARD 4 in 7; DUO, ACCENT, MONO. Never INVERT
Mode	5 modes	any; POLY twice as likely
Rate	½, 1, 2	1 three times in five
Swing	0–60%	off, or 10–50% (35% chance)
Decay	1–8 steps	1.5–6
Pulse	0–100%	15–80%
Ripple	0–100%	off, or 30–100%
Density	5–100%	100%, or 55–95%
Depth	0–100%	off, or 30–100%
Downbeat push	0–100%	off, or 20–80%
Row shift · scenes	on/off · 4/8/16 bars	30% chance · any
Voice mutes	any voice	hat or FX, rarely. Never kick or snare
Flash · live edit	on/off	never

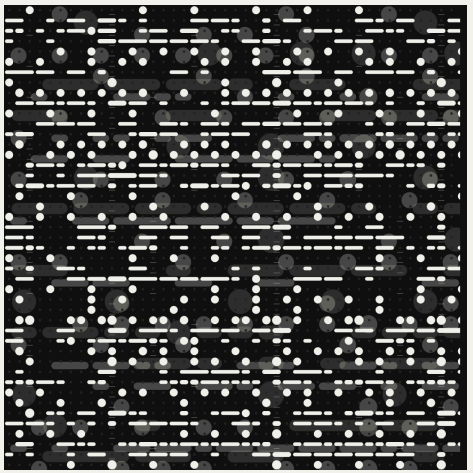

1000 · STANDARD · POLY · DEPTH, RIPPLE

1061 · ACCENT · POLY · DEPTH

12A7 · DUO · AUTO · ½ TIME, PUSH

14ED · MONO · POLY · SWING, SHIFT

Same seed, same event, four looks. Note a code beside each finished asset so it can be made again or matched on the projector.

Making the files

STILLS AND LOOPS

In the player, open Export. PNG and PDF save a snapshot (the still poster or the current frame) at 1×, 2× or 3×; a 3× PDF of the poster is 274 × 343 mm at 300 ppi. MP4 LOOP renders a seamless loop frame by frame: H.264 in Chrome, Edge and Safari, VP9 where H.264 isn't available.

For batches, run the same export from the repo folder. In the player: Export → Command line instead → Copy.

```
python3 scripts/render_loop.py 211126 NIGHT 140 poster 1 out.mp4 '{"look":"12A7"}'
```

THE REPO · alg0riddims

generator/	alg0_field.py: vector SVG fields for print, with programme and colourway.
player/	alg0_field.js, the animated field and looks (a drop-in VJinA layer), and the player template.
dist/	alg0_player.html, ready to open, and this PDF.
brand/	Logo files: outlined SVG and PNG wordmarks, micro mark, favicons.
scripts/	build_player, build_identity, make_marks, render_loop.
tests/	Checks that print and screen draw the same field, cell for cell.

Print

Kick Red, FX Cyan, Ultraviolet, Phosphor and Acid Lime sit outside CMYK. A standard four-colour job will dull them. For physical runs, use risograph fluorescent inks or neon spot inks for screen print, swatched from the printer's physical ink chart. Screen hex values are never the print reference.

VOICE	NEAREST RISO INK · SWATCH TO CONFIRM
KICK RED	Bright Red / Fluorescent Pink
FX CYAN	Aqua
NIGHT · STREAM	Purple · Blue
WORKSHOP · JAM	Green · Fluorescent Yellow
TALK · ARCHIVE	Yellow / Orange · Medium Grey
INK (type)	Black

INVERT is the print arrangement: paper ground, ink hats and type, red kicks. Proof it before committing.

VERSION

v0.5 · 24/10/2026 · draft for review. The mark uses Plex's own dotted zero; the slashed zero is retired. Adds outlined logo files, minimum sizes, a hand-set favicon, and one repo with build scripts and tests. Carries over v0.4: six programmes, five colourways, the six-zone layout, motion modes and look codes. Supersedes v0.2–v0.4.

Fonts: IBM Plex, SIL Open Font Licence 1.1
